## **DETAILED ACTION**

### ***Response to Amendment***

1. In response to the office action from 11/16/2004, the applicant has submitted an amendment, filed 2/16/2004, amending the abstract and Claims 1-8, while arguing to traverse the art rejection based on the limitation regarding translation cost determination (*Amendment, Page 11*). The applicant's arguments have been fully considered but are moot with respect to the new grounds of rejection in view of Rutten et al (*U.S. Patent: 6,632,251*).
2. Based on the amendments to the abstract, the examiner has withdrawn the previous objections directed towards minor informalities.
3. Based on the amendments to the claims, the examiner has withdrawn the previous 35 U.S.C. 112 rejection directed towards a lack of proper antecedent basis.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. **Claims 1-8** are rejected under 35 U.S.C. 103(a) as being unpatentable over Brotz (U.S. Patent: 4,882,681) in view of Rutten et al (U.S. Patent: 6,632,251), and further in view of Davitt et al (U.S. Patent: 5,392,343).

With respect to **Claim 1**, Brotz discloses:

Delivering language information as to its own language as well as the other person's language, a telephone number of a first telephone terminal as well as a telephone number of a second telephone terminal belonging to said other person (*telephone numbers would be inherently included and required in order to establish the connection between the two cellular telephone devices shown in Fig. 2*) together with information for requesting translation from said first telephone terminal to a network at the time of establishing a phone line (*selector frequency, Col. 3, Lines 32-54*),

Connecting said first telephone terminal with said second telephone terminal by means of said network through a translating apparatus, which has been previously prepared (*Col. 3, Lines 32-54, and Fig. 2*);

Translating a speaking in said first telephone terminal and a speaking in said second telephone terminal by means of said translating apparatus in accordance with said language information to deliver both the spoken contents translated to their opposite parties' telephone terminals, respectively (*Col. 3, Line 32- Col. 4, Line 58, and language translators, Fig. 2*);

Brotz does not teach a means for counting the translation time in determining a price for a translation service, however Rutten discloses such a means (*timing system, Col. 12, Lines 52-62*).

Brotz and Rutten are analogous art because they are from a similar field of endeavor in language translation. Thus, it would have been obvious to a person of ordinary skill in the art, at

the time of invention, to modify the teachings of Brotz with the means for determining a charge for a translation service based on time as taught by Rutten to in order to implement a means of calculating a charge for additional services provided to a user in order to receive payment for those extra services (*Rutten, Col. 12, Lines 55-57*).

Brotz in view of Rutten teach a means for providing a translation of a telephone conversation and billing that translation as noted above, however Brotz in view of Rutten do not teach a means for adding that bill to a phone call rate, however Davitt recites adding services for a language translation (interpreter) to a billing for an actual telephone call (*Col. 5, Line 59- Col. 6, Line 5*).

Brotz, Rutten, and Davitt are analogous art because they are from a similar field of endeavor in language translation. Thus, it would have been obvious to a person of ordinary skill in the art, at the time of invention, to modify the teachings of Brotz in view of Rutten with the means for adding a fee for translation services to a call charge in order to provide a caller with a detailed billing record that includes call and additional service fees (*Davitt, Col. 5, Line 65- Col. 6, Line 5*).

With respect to **Claim 2**, Brotz additionally discloses:

The first telephone terminal and the second telephone terminal are cellular phones (*cellular telephone, Col. 3, Lines 24-27*).

With respect to **Claim 3**, Davitt additionally discloses:

Network is a fixed telephone network (*POTS, Col. 6, Lines 12-17*).

With respect to **Claim 4**, Brotz in view of Rutten, and further in view of Davitt teaches the speech translation system featuring a billing calculation means, as applied to Claim 1.

Although neither Brotz, Rutten, nor Davitt specifically suggest that the telephone network is an internet phone network, the examiner takes official notice that it would have been obvious to utilize a telephone system internet network embodiment to further increase method compatibility with a commonly used and readily available internet telephone network type.

**Claims 5-8** contain subject matter similar to Claims 1-4, respectively, and thus, are rejected for the same reasons.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

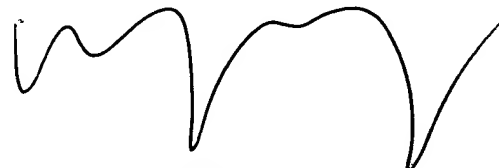

Jaiswal et al (*U.S. Patent: 6,002,754*)- teaches an apparatus for billing a telephone call and additional services.
